Frisomat’s unique Meccano principle is unrivalled. Every part is prefabricated and simply fits into place like a giant building kit. Every single part is meticulously designed, developed and produced by a vast team of experts. The result: a wide range of innovative structures and applications in compliance with local requirements and regulations. Thanks to its fully integrated production and development chain, Frisomat guarantees a clear and reliable overview on projected costs. State-of-the-art technology monitors every phase of the process. A comforting thought.

Go. A Frisomat is easy to assemble thanks to the prefabricated, innovative and standardised components. Our technicians know the system inside out. All over Europe, Frisomat assembly teams are ready to construct your project. And all over the world, you benefit from Frisomat’s support to have it assembled. A consistent approach. The final link in an integrated chain. At your service.

Almost limitless personalisation with completely prefabricated and standardised components. Available for almost every conceivable application, however complex and sophisticated. From foundations to finishing parts, every component bears the Frisomat stamp. Standardisation with a highly personalised touch.
From workshop to storage space. A Delta building can be used for almost limitless applications.

Light but solid. Every part can be manipulated by 2 people. All parts fit together like a giant building kit and can be built virtually everywhere.
Dimensions
Delta. A classic industrial building at an unbeatable price.

All dimensions can vary depending on local requirements and regulations.
Built to last

Frisomat only uses steel from the highest quality. The fully galvanized base structure is made of prefabricated cold rolled profiles. Covered with prepainted in-house produced corrugated sheets, the building needs no special maintenance. Cold rolled galvanized profiles reduce weight yet offer maximum stability and strength. Thanks to these prefabricated elements, Delta concepts can simply be transported and built all over the world.

The lightweight, galvanized spans are approximately 2.5 m apart. They distribute the external forces over the entire structure. The prefabricated foundation elements only require limited additional concrete molding which assures a swift assembly on almost every soil. As such, relatively simple foundations offer the necessary support and stability. When necessary, Delta buildings can be mounted on purpose-built foundations, using special anchor sets or expansion bolts, all in accordance with the highest local standards and regulations. For non-permanent applications, a temporary solution guarantees a minimal impact to your existing underground. Economical storage in a short timeframe. A lifetime partner.

Applications

Delta buildings are fast to assemble and easy to relocate. Whether you need permanent space or a temporary solution, Delta fulfills your needs. From a couple of months to several decades, Delta offers you a safe and reliable construction. Storage, production site, showroom workshop or agricultural use, the possibilities are almost limitless. A wide range of accessories give you the freedom to choose exactly what you need. A wide variety of colors, extra wide sliding doors, various types of man doors and windows, smoke vents or sectional doors, the choice is yours.

Whatever space you need, wherever in the world, we build it for you.

Maximum interior space at an unbeatable price. The gable roof with a roof pitch of 22° gives the building its classic look. Flexible space, a cost efficient investment.
DELTA

Five-star choice:
- Spans from 7.5 m to 15 m, Sidewall heights from 2.5 m/4 m and 5 m
- Galvanized base structure
- Fast and flexible
- Gable roof with roof pitch 22°
- Prepainted corrugated cladding
A high quality building requires high quality material. The galvanized base structure with a 275 g/m² zinc layer is built out of cold rolled C-profiles. This guarantees the best protection combined with optimal strength. We make your building last longer.

Depending on site circumstances and local regulations, Delta buildings can be installed on prefabricated concrete elements which require only limited additional concrete molding. For temporary use, special modifications guarantee a minimal impact on your existing soil. If necessary Delta can be built on purpose-built foundations. The adapted anchor sets or expansion bolts secure the building to resist the toughest climate conditions.

A design that stands the test of time with minimum maintenance. All finishings are tailor-made. The perfect fit in high quality material. Every Delta can be equipped with a performing insulation foil to reduce extreme temperatures and to avoid condensation.
Sheeting

Frisomat only uses prepainted S280 steel of the highest quality with a zinc layer of 275 g/m² to profile your sheets and finishings. The quality is guaranteed by the different layers of the sheet:

- Surface coating in standard colour
- Primer
- Passivating layer
- Zinc layer
- Steel core
- Zinc layer
- Passivating layer
- Protective reverse coating

Colours

We offer a variety of standard colours for your projects.

- RAL 1015
- RAL 1023
- RAL 5008
- RAL 5010
- RAL 3000
- RAL 6009
- RAL 6011
- RAL 7022
- RAL 8014
- RAL 8012
- RAL 2008
- RAL 9006
- RAL 9002
- RAL 3012

Mezzanines. Redefining space.

Need more storage room within your Frisomat building? Want to create extra offices without sacrificing any space? The answer is Frisomat’s unique mezzanine: a suspended floor, made of the same sustainable, galvanised material as your structure. The load capacity is no less than 300 kg per m² and, at a standard yet adaptable height of 2.8 m, it provides additional storage space underneath. Additional space at an unbeatable price.

Do you have more specific needs? As an alternative to the Frisomat mezzanine, we offer a more traditional solution: a suspended floor made of a prepainted steel deck supported by a classic, hot rolled structure. This conventional intermediate floor can be covered with a lightened concrete deck. Specific solutions for specific needs.

All Frisomat’s mezzanines are individually designed for specific locations or uses and can easily be transformed. As such, they ensure better use of space and help you save money and increase profitability. Space redefined.
Innovators in steel buildings. We have over 30 years of worldwide experience, more than 20,000 different projects all over the world and more than 20,000 satisfied customers. Every project has its own standards, requirements, specifications and complexities. No matter what, we build it for you. Anywhere, anytime. Your project, our pleasure.
